Fargo, ND 58103

Re: Rafferty, Mary M  
Dakota Clinic No.: 000228201  
Date of Birth: 06/22/1946

To Whom It May Concern:

Mary Rafferty is a 60-year-old female I follow for healthcare maintenance. This patient presented on April 23<sup>rd</sup> to the emergency room at Innovis Hospital with a history of left facial palsy and had findings very consistent with Bell's palsy sudden onset.

The patient left the hospital with very little improvement. She had been given a trial of medication but did not improve. The patient reported to us a healing that occurred on 05/07/06 when she was at the gravesite of a priest who is familiar to her.

We followed up with her on several occasions here in the office and she is completely resolved and cured of her Bell's palsy. The patient is doing well and continues health maintenance with us.

Thank you in advance of your concern regarding this patient. Please let us know if you require any other information or documentation. We would require release of information from Mary Rafferty in order to supply that information to you.

Sincerely,

Richard Rohla, MD  
Department of Family Practice
